SAMPLE CLINICAL LABORATORY REPORT

FICTIONAL TEST DOCUMENT - NOT VALID FOR MEDICAL USE

Patient: Ali Ahmed (fictional)

Sample ID: DEMO-IDA-002

Age / Sex: 28 years / Male

Report date: 30 October 2026

Reason for testing: Tiredness and dizziness

Specimen: Blood

Blood test results

Test	Result	Typical adult male range	Flag
Hemoglobin (Hb)	10.2 g/dL	13.5-17.5 g/dL	LOW
Hematocrit (Hct)	33%	41-53%	LOW
MCV	72 fL	80-100 fL	LOW
MCH	22 pg	27-33 pg	LOW
White blood cells	6.5 x10^3/uL	4.0-11.0 x10^3/uL	Normal
Platelets	380 x10^3/uL	150-450 x10^3/uL	Normal
Ferritin	9 ng/mL	30-400 ng/mL	LOW
Serum iron	32 ug/dL	60-170 ug/dL	LOW
Transferrin saturation	8%	20-50%	LOW

Simple explanation

Likely condition: Iron-deficiency anemia. This means the blood has less hemoglobin than expected, and the body has low iron stores. Hemoglobin helps carry oxygen around the body.

What the results mean: Low hemoglobin indicates anemia. Low MCV means red blood cells are smaller than usual. Low ferritin and transferrin saturation support iron deficiency.

Common symptoms in this fictional case

Feeling tired, looking pale, getting dizzy when standing up, and becoming short of breath during exercise.

Recommended clinical follow-up (example only)

A clinician would review diet and possible blood loss, determine why iron is low, and decide whether iron treatment and repeat blood tests are appropriate. In an adult male, investigation of possible gastrointestinal blood loss is particularly important.

Testing note: All patient details and numeric results in this report are invented for software testing. The condition, units, and general clinical interpretation reflect real medical concepts. Reference intervals vary by laboratory.
